

Foster Pepper has deep experience with complex infrastructure projects. Our attorneys have sited, permitted, and defended major infrastructure projects throughout the Pacific Northwest, including stadiums and sports arenas, convention centers, transportation corridors, bridges, roads, light rail, intermodal facilities, airports and runways, sewage and water treatment plants, universities, and hospitals.

Our substantial experience extends to public, private, and public/private projects. Foster Pepper's Infrastructure team combines the skills of lawyers across multiple disciplines to provide clients with innovative solutions to the many complex issues that are often associated with these types of projects.

We have vast project experience, which often begins at the earliest stages of the project with strategic legal advice on issues such as legislation and financing and continues through construction and operation of the project. The depth and breadth of the firm's Infrastructure team allows attorneys to provide assistance on virtually every aspect of the project.
